

EDUCATION

- **SUNY New Paltz** Jan 2025 – May 2027
B.S. in Computer Science — GPA: 3.7
◦ **Relevant Coursework:** Data Structures, Algorithms, Operating Systems, Databases, Artificial Intelligence, Software Engineering
New Paltz, NY
- **Rockland Community College** Sep 2023 – Dec 2024
A.S. in Mathematics & Computer Science — GPA: 3.9
Rockland, NY

EXPERIENCE

- **Software Engineer Intern — z/OS Container Extensions** May 2026 – Aug 2026
IBM Poughkeepsie, NY
 - Built an **MCP-integrated AI agent** that replaced a **10+ step manual UI workflow** with a single natural language command, autonomously invoking **IBM z/OSMF** workflow REST APIs to provision and manage containerized workloads.
 - Automated mainframe infrastructure provisioning by scripting IBM's REST APIs and XML workflow definitions in **Python**, consolidating a separate multi-step manual process into a single reusable tool.
 - Designed and debugged **8+ automated workflows** orchestrating the deploy, modify, and teardown lifecycle for containerized workloads on **z/OS**, including a status-check threshold fix that aligned instance health checks with the underlying log query window.
 - Shipped changes to a **production release (v2.4.x)**, collaborating with senior engineers through code review to validate correctness and reliability across a large-scale enterprise codebase.
- **Software Engineer Intern** Jul 2025 – Dec 2025
Aurify AI — Early-stage AI startup Remote
 - Built user profile features in **React + TypeScript** with **Supabase** — create/update/delete flows with auditing — shipping **5+ pull requests** to production.
 - Configured linting and formatting tooling that reduced repetitive review comments and unified code style across the entire codebase.
 - Wrote **Jest** unit and smoke tests for **3+ services**, increasing test coverage and catching regressions in CI before they reached production.
- **Software Engineer Intern — AI/ML** Jun 2023 – Aug 2023
Macrosoft Inc. — IT consulting firm Bedminster, NJ
 - Built **Python** preprocessing pipelines for text and image datasets, cutting training iteration time by **~20%**, and optimized **2 RESTful** services powering AI features to reduce response latency.
 - Delivered features on schedule across a **3-month** engagement by scoping work with engineers and product managers in **Agile/Scrum** sprints.

PROJECTS

- **RampUp AI — Intern Productivity Assistant** *React, TypeScript, FastAPI, Supabase, Claude API*
 - Built a full-stack AI web app that classifies workplace inputs (Slack messages, terminal errors, Jira tickets) and generates plain-English explanations, action items, and tone-aware reply drafts using the **Claude API**.
 - Architected **FastAPI** backend with **Supabase** (Postgres + Auth + RLS) and **React + TypeScript** frontend; deployed with **Vercel** frontend and Dockerized **FastAPI** backend, with a weekly brag-summary feature that auto-generates **resume bullets** from logged intern progress entries.
- **repocheck — GitHub Repo Health Scanner** *Python, Click, Rich, GitHub REST API, PyPI, GitHub Actions*
 - Built and published a **Python CLI** to **PyPI** (v0.4.0, 4 releases) scoring repos across **14 weighted health checks** with JSON/CSV/Markdown/HTML export; published a **GitHub composite Action** to enforce minimum scores as a CI gate.
 - Implemented a **local web dashboard** with Chart.js score history, interactive fix checklists, and auto-refresh; supports org-wide scanning, batch mode, and **Slack webhook** score reporting.
 - Achieved **57-test coverage** (unit + end-to-end with mocked GitHub API) across **14 checks** and **8 source files**; handles both the legacy branch protection API and the new **GitHub rulesets API**.
- **ratelimiter-py — Rate Limiting Library** *Python, Redis, FastAPI, Click, PyPI*
 - Implemented **3 rate-limiting algorithms** (token bucket, sliding window, fixed window) with pluggable in-memory and **Redis backends** using atomic operations (INCR/EXPIRE, sorted sets) and fail-open availability handling.
 - Built **FastAPI middleware** (429/Retry-After/X-RateLimit-* headers), a **41-test suite** covering thread safety and boundary edge cases, and a CLI tool benchmarking p50/p99 latency.

TECHNICAL SKILLS

- **Languages:** Java, Python, JavaScript, TypeScript (ES6+), C, C++, SQL, HTML/CSS, Bash/Linux
- **Frameworks/Tools:** React, Node.js, Next.js, Spring Boot, Flask, FastAPI, Docker, AWS
- **Databases/DevOps:** PostgreSQL, MySQL, MongoDB, Redis, Git/GitHub, CI/CD, Agile/Scrum
- **AI/LLM:** Claude API, MCP (Model Context Protocol), OpenAI API, Gemini API, GitHub Copilot, Cursor
